

## Dyop® Visual Impairment Response

The current prototype visual impairment test is at:

[http://www.dyop.info/documents/Dyop\\_Visual-Impairment\\_Test-x10.swf.html](http://www.dyop.info/documents/Dyop_Visual-Impairment_Test-x10.swf.html)

One person should be an observer while the other subjects get stoned.

Evidence of intoxication should be an increase in the test response time (from 20 seconds) for the people who are stoned, which should increase with (interval) time and with increased (smoking and/or) intoxication. There should also be an increase in MISSED responses from zero up to 10.

**This is a fillable form. The test variables are:**

the Estimated Level of THC Intoxication:

None / Moderate / Mild / Severe,

the Dyop® Sobriety Test Score (10 correct down to 0 correct), and

the Dyop® Sobriety Test Response Time (20 seconds or greater).

(Isn't Science great!!!!?) **Send responses to Allan@Dyop.info**

=====

Subject #1: \_\_\_\_\_ (identity to be kept CONFIDENTIAL)

Trial	1	2	3	4	5
Interval Time (minutes)	0	15	30	45	60
Dosage - none=0 / moderate=1 mild=2 / severe=3					
Score (10 correct to 0)					
Response time (sec.)					

Subject #2: \_\_\_\_\_ (identity to be kept CONFIDENTIAL)

Trial	1	2	3	4	5
Interval Time (minutes)	0	15	30	45	60
Dosage - none=0 / moderate=1 mild=2 / severe=3					
Score (10 correct to 0)					
Response time (sec.)					

Subject #3: \_\_\_\_\_ (identity to be kept CONFIDENTIAL)

Trial	1	2	3	4	5
Interval Time (minutes)	0	15	30	45	60
Dosage - none=0 / moderate=1 mild=2 / severe=3					
Score (10 correct to 0)					
Response time (sec.)
