

## Dyop® Visual Impairment (Intoxication) Test

The current prototype visual impairment and intoxication test is at:

[http://www.dyop.info/documents/Dyop\\_Visual-Impairment\\_Test-x10.swf.html](http://www.dyop.info/documents/Dyop_Visual-Impairment_Test-x10.swf.html)

One person should be an observer while the other subjects get stoned. A NON-impaired response should take 14 to 20 seconds to complete the ten test responses. The subjects should take the test to create a response benchmark prior to using any intoxicating substances.

An increase in test completion time (30 seconds or longer) should be an indication of intoxication. Test completion times above 30 seconds indicate the extent of intoxication and/or visual impairment. People who are stoned, and with increased smoking and/or intoxication, should also have an increase in test completion time for the repetition of the test at 15 minute intervals. There should also be an increase in MISSED responses from zero up to 10 with increased intoxication.

**The test variables are:**

The Estimated Level of THC Intoxication: None / Moderate / Mild / Severe,

The Dyop® Sobriety Test Accuracy Score: 10 correct down to 0 correct

The Dyop® Sobriety Test Completion Time: 20 seconds or greater.

(Isn't Science great!!!!?) **Send responses to Allan@Dyop.info**

=====

Subject #1: \_\_\_\_\_ (identity to be kept CONFIDENTIAL)

Trial	1	2	3	4	5
Repetition Time (minutes)	0	15	30	45	60
Dosage - none=0 / moderate=1 mild=2 / severe=3					
Score (10 correct to 0)					
Test Completion time (sec.)					

Subject #2: \_\_\_\_\_ (identity to be kept CONFIDENTIAL)

Trial	1	2	3	4	5
Repetition Time (minutes)	0	15	30	45	60
Dosage - none=0 / moderate=1 mild=2 / severe=3					
Score (10 correct to 0)					
Test Completion time (sec.)					

Subject #3: \_\_\_\_\_ (identity to be kept CONFIDENTIAL)

Trial	1	2	3	4	5
Repetition Time (minutes)	0	15	30	45	60
Dosage - none=0 / moderate=1 mild=2 / severe=3					
Score (10 correct to 0)					
Test Completion time (sec.)
